PROJECTS

CANCOM

PLAN.
BUILD.
PERFORM.

2017 – TODAY
www.cancom.de

As a Digital Transformation Partner, CANCOM accompanies organisations into the digital future. It supports customers to simplify complex enterprise IT and increase their business success through the implementation of modern technology. In order to comprehensively meet the IT needs of companies, organisations and the public sector, CANCOM delivers tailor-made IT end to end from a single source.

The CANCOM Group's range of IT solutions includes consulting, implementation, services and the management of IT systems. Customers benefit from the extensive expertise as well as an holistic and innovative portfolio that covers the IT requirements of companies necessary for a successful digital transformation. As a hybrid IT integrator and service provider, it provides an integrated range of services and solutions including business solutions and managed services, such as cloud computing, analytics, enterprise mobility, IT security, hosting and as-a-service offerings.

My role 2020 – TODAY:

- Azure System Engineer
 - o Creation of cloud governance concepts
 - o Creation of cloud architectures in Azure
 - o Realization / implementation of cloud-based architectures
 - o Implementation of Azure components with Terraform
- Projects:
 - o Callwey GmbH
 - Cratation of a cloud governance concept with a focus on Azure storage.

My roles 2017 - 2020 (apprenticeship):

- **Training as IT specialist for system integration**
 - o Network & hardware technology
 - o Planning, building, setting up and maintaining IT systems
 - o Problem identification and resolution
- **Working at:**

Telefonica

ADAC

2014 – TODAY

www.tralumaxpress.de

Traluma UG is a Munich-based software company that specializes in the transport and logistics market and has advanced features and customer service that companies can use to optimize their processes and work more efficiently.

Over the years the company developed two systems

The tralumaxpress system is a scalable, fail-safe disposition management, which is used in the offer management, availability, order preparation, order management, capacity utilization, disposition and billing of all transport orders. With the connection to the traluma portal, the system has direct access to all customer data, which is selected and processed autonomously until the system carries out an automatic order confirmation and disposition.

My role in the first phase:

Consulting and preparation of specifications necessary for the external development of the system.

- Creation of a functional road map
- UI/UX Design
- Creation of specifications for:
 - o Object database
 - o Object management (customer and admin)
 - o Location database
 - o Location management (customer and admin)
 - o User Management (Provider)
 - o Customer management
 - o Order management in the backend
 - o Order management (customer and provider)

- o Payment process
- o Disposition planning / planning board
- o Role management
- o Registration (customer and provider)
- o Order creation and process flow (transport, relocation and disposal)
- o Resource management
- o Mobile Applikation

My role in the second phase:

After creating the specifications, my next task was the support of the developers on the issues related to the Specifications and their implementation as well as the coordination within the test environment, after it was provisioned by the Development partner with test execution and defect management.

- Participation in development meetings
- Joint testing with development partners in India
- Module test
- Integration test
- Function test
- UAT
- Test creation
- Test execution
- Defect creation
- Defect management
- Adjustment of the Specifications

My role in the third phase:

After evaluating the usability test, further system optimizations were carried out before go-live.

2014 – TODAY
released soon

The Transport Portal is used to create orders based on the disposition management of tralumaxpress, which is used by private customers. It enables individual transport orders for courier, express and parcel deliveries („CEP“) to be assigned automatic through the system.

My role in the first phase:

Consulting & preparation of specifications necessary for the external development of the system.

- **Creation of a functional road map**
- **Creation of the specifications**
- **UI/UX Design**

My role in the second phase:

After creating the specifications, my next task was the support of the developers on the issues related to the Specifications and their implementation as well as the coordination within the test environment, after it was provisioned by the Development partner with test execution and defect management.

- **Participation in development meetings**
- **Joint testing with development partners in India**
- **Module test**
- **Integration test**
- **Function test**
- **UAT**
- **Test creation**
- **Test execution**
- **Defect creation**
- **Defect management**
- **Adjustment of the Specifications**

My role in the third phase:

(Integration of tralumaxpress and the traluma portal)

After the development phase, there where 10 transport companies as well as 20 customers from Munich found to test the functions of tralumaxpress and the conected portal.

- **Test creation**

For the test execution of the main functions by the customers as well as the transport companies.

- **Test preparation**

Creation of the system documentation and the test oracle. Also training of the testers regarding the system.

- **Test supervision**

Operating as the first contact for the testers (customers) regarding questions and problems.

- **Test evaluation**

The tests carried out by the customers were analyzed to determine errors and the quality of the systems.

- **Evaluation for system optimization**

For this purpose, the comments and wishes of the customers where analyzed and specified for evaluation by the development team and Traluma management for further implementation of changes based on their benefits and priority.

My current role:

(for tralumaxpress and traluma portal)

- **Project management / development management**
- **Customer consulting regarding new functions**
- **Creation of specifications for new functions**
- **UI / UX design for new functions**
- **Continuous system improvements**
- **Requirements management**
- **Test management**

2014 – 2017
www.tipico.de

Miseco Sports LBS

Tipico is an international provider of sports betting and casino games based in the Portomaso Business Tower in San Ġiljan, Malta. The company has offices in Germany, Austria, Gibraltar, Croatia, Colombia and Malta. Overall, Tipico has more than 6,000 employees.

Under the direction of Miseco Sports, there are 10 facilities in Munich. My tasks were the system administration and shop management. Furthermore, I was part of the Tipico Beta Test Team for the system extension of the shop systems as well as online systems.

My role:

There are 13 branches in Munich under the management of Miseco Sports (franchisee). My duties consisted of

- System administration and shop management.
- Local system administrator for all 13 shops
- Problem identification and resolution
- Shop management
- Training of new employees
